# OUR SERVICES

HSI's experienced geologists use the latest mapping software and techniques to provide you with geological analyses essential to your operation. Using basin evaluations to production geology mapping, HSI works to help you overcome even the most complex geology.

## Geosteering

HSI's geosteering services provide accurate wellbore positioning needed for landing and staying in the zone. This includes dip rate, position of bit in the stratigraphic section, drilling targets, and the location and throw of faults. Our senior consultants can interact directly with the Directional Driller to direct target line adjustments for landing and maximizing objective penetration. We provide unlimited comprehensive reports along with 24/7 monitoring and support throughout the drilling process. HSI also provides FREE access to LNN geosteering software and support while using our services\*.

## Geo-Evaluations/Operations/Project Mgmt.

Utilizing the latest mapping software and techniques HSI can provide geological analyses, lease hold assessments and prospect evaluations. HSI offers geological operations support, including pre-spud preparations, drilling operations and project management.

## Geo-Tech/Data Management

HSI works to aid clients in meeting their individualized data processing and interpretation needs by providing a comprehensive and customized data management package.

## Application/IT Support

HSI has a team of experienced IT and Application support specialists who will provide top-notch one-on-one help, mentoring and work flow analysis. Our team can help every step of the way from installing to optimizing and maintaining systems.

## Why choose HSI?

- Reliable long-term support
- State of the art geological mapping and analyses
- Industry expertise
- Customized services, including data management
